## Advantages of Ceramic Coating

- **Chemical Resistant** - Ceramic coatings protect vehicles from environmental contaminants such as bird droppings, acid rain, insect stains, brake dust, road debris, tar & airborne pollutants
- **Water Repellent** - Ceramic coatings create ultra hydrophobic finish which is very slick & smooth layer that repels water, ultimately keeping your vehicle easy to maintain & stays clean much longer
- **Sunscreen** - Ceramic Coatings shields the vehicle dispersing over 99% of UVA & UVB rays offering a broad spectrum of UV protection therefore prevents oxidation & paint fading
- **Long Term Durability** - Due to silicon nitride (SiN) & silicon carbide (SiC) in the formulation of ceramic coat it adds superior strength & durability to the vehicles protection therefore no other waxes or sealants are necessary
- **High Gloss Finish** - After the ceramic coating finish is installed the vehicle will retain a superior finish that will last years even after the basic car wash
- **Easy Maintenance** - Ceramic topcoats prevent staining of environmental contaminants that just a basic wash & rinse will remove them easily
